

Support of Discontinued Switchgear

Many electrical installations in use today are perfectly serviceable with the exception of a small number of components. It may be that spare parts are no longer available or the original manufacturer may no longer be trading. In many cases they are trading but unwilling to help with outdated products. You may be looking to add circuits, replace switching devices, add sections or you may even want a complete replacement whilst maintaining your existing cables. Many older installations have trouble with aged control or protection systems or exhibit problematic tripping. Do you require metering added to your existing installation?

Many Insurance Companies are introducing more stringent requirements regarding your electrical installation. Does your equipment comply? If not, we can provide retrofit solutions for your equipment to comply, without the need for a complete replacement.

We specialise in supporting your existing installation fully with solutions to all of the problems listed above.....and more. Whatever the problem, even if one of our many existing kits doesn't fit your requirements, we will utilise the latest design technology to provide you with a bespoke solution.

We will not condemn your existing installation because it is inconvenient to modify. We will not simply try to sell you a product from our catalogue or tell you that your switchgear must be replaced. Just because the original supplier is not around any more, it doesn't make your switchgear unserviceable.

If you are fed up of being told that your installation must be ripped out when it operates perfectly well, contact us. We can bring your installation up to modern standards at a fraction of the cost or inconvenience of a replacement. But, if a replacement is required, we can do it in such a way that disruption is minimised.

The benefits include:

Reduced Maintenance	Minimised downtime
Reduced cost of replacement	Improved performance
Improved reliability	Increased operator safety
Increased functionality	Communications / metering additions
Remote control options	Insurance compliance

We are able to provide services on a huge range of equipment including:

Ellison - Reyrolle - Schneider - Ottermil - Merlin Gerin - Johnson Philips - MEM - GEC - Siemens - Terasaki ABB - Whipp & Bourne - STS switchgear - Mitsubishi - Dorman Smith - General Electric - Eaton - Proteus - AF Switchgear and many more.....

For more details of how we can help support your business contact us by any of the methods above.
